SUMMARY

Results-driven Enterprise Software Consultant and DevOps Engineer with experience in ERP application support, incident management, system administration, and cloud/DevOps environments. Skilled in providing L1/L2 functional and technical support, troubleshooting complex application issues, managing user access and permissions, and collaborating with cross-functional teams to ensure reliable business operations. Hands-on experience with Jenkins, Docker, Kubernetes, Terraform, AWS, Prometheus, and Grafana, with a strong understanding of CI/CD, cloud infrastructure, monitoring, deployment, and system reliability. Proven ability to perform root cause analysis, manage escalations, support application deployments, and deliver effective technical solutions in enterprise environments.

TECHNICAL SKILLS

- Operating Systems: Windows
- Productivity Software: MS Office, Outlook, Teams
- DevOps & Cloud Tools: Graffana, Github, Jenkins, Docker, AWS
- Languages: Python, HTML5, CSS3, C, C++
- Professional Skills: Troubleshooting, Stakeholder Management, Cross-functional Collaboration, End-user Training, SOP Development, Problem-Solving, Time Management

EDUCATION

- **Master of Computer Applications MCA** **July 2023 - May 2025**
  B. S. Abdur Rahman Crescent Institute Of Science And Technology Chennai, TN
  CGPA : 9.0
- **Bachelor of Computer Applications BCA** **July 2020 - May 2023**
  Guru Nanak College Chennai, TN
  CGPA : 9.53

WORK EXPERIENCE

Enterprise Software Consultant - NEXWARE TECHNOLOGIES LLC [October 2025 - Present (Dubai, UAE)]

- Provide Level 1 (L1) functional and technical support for ERP applications, troubleshooting system issues and resolving user queries to ensure seamless business operations.
- Monitor ERP system performance, perform initial diagnostics and root cause analysis, and escalate complex technical issues to senior teams or external vendors.
- Manage incident tracking, service requests, ticket prioritization, resolution documentation, and user feedback in accordance with established support procedures and SLAs.
- Administer user provisioning, role-based access control (RBAC), permission assignments, and access rights management in compliance with IT security policies.
- Collaborate with cross-functional teams, including Finance, Production, Inventory, and Procurement, to resolve ERP-related issues and optimize business workflows.
- Support ERP configuration, master data management, transactional data processing, and basic system customization under senior team guidance.
- Participate in functional testing, data validation, user acceptance testing (UAT), system upgrades, patch deployments, and post-implementation verification.
- Deliver end-user training and functional guidance on ERP modules, transaction processing, system workflows, and application best practices.
- Develop and maintain standard operating procedures (SOPs), technical documentation, troubleshooting guides, FAQs, and end-user training materials.

DevOps Engineer - Wolters Kluwer [March 2025-June2025 (Tamil Nadu, India)]

- Designed and implemented robust CI/CD pipelines using Jenkins to automate build, test, and deployment processes.
- Managed infrastructure using Infrastructure as Code (IaC) tools like Terraform and CloudFormation, ensuring consistent and scalable environments.
- Monitored system performance and availability using tools such as Prometheus and Grafana.
- Deployed and maintained cloud infrastructure on AWS/Azure, including EC2, S3, VPCs, and security groups.
- Collaborated with development teams to integrate DevOps best practices, reduce deployment errors, and increase deployment frequency.
- Implemented security automation (e.g., vulnerability scanning, secrets management) to ensure compliance and minimize risk.
- Containerized applications using Docker and orchestrated services with Kubernetes for scalable and fault-tolerant deployments.
- Responded to incidents, performed root cause analysis, and improved system reliability through proactive monitoring and alerting.

PROJECTS UNDERTAKEN

Disease Diagnosis System Powered By ML Algorithms - MCA Major Project

- Developed a disease diagnosis system powered by machine learning algorithms to detect diabetes using Support Vector Machine (SVM) and Alzheimer's disease using Convolutional Neural Networks (CNN). Utilized the Data Driven Structured Diabetes dataset for structured data analysis and an MRI image dataset for Alzheimer's classification. Achieved over 98% accuracy by implementing effective preprocessing techniques and hyperparameter tuning. Designed a custom CNN architecture to classify different stages of Alzheimer’s from brain scans. Integrated both models into a unified web-based application using Streamlit for ease of use. Tools and technologies used include Python, Scikit-learn, TensorFlow, Keras, Streamlit and Pandas.

Steganography

- The primary objective of this application is to establish a comprehensive platform for hiding data within various types of multimedia files, including images, audio, and text. Technology used is Python with Flask Framework. steganography conceals the existence of the hidden data.

Online Job Portal System

- An online job portal is a platform where job seekers can sign up, search for jobs that match their skills, and apply for them. At the same time, employers can register, post job openings, and find suitable candidates for their companies. I built this project using HTML, CSS, and JavaScript for the front end, PHP for the back end, and a XAMPP server to host and manage the website locally.

CERTIFICATIONS

- Programming in Java, NPTEL [July 2024 - October 2024]
- Software Testing, NPTEL [July 2021 - October 2021]
- PCAP Programming Essentials In Python, Cisco Networking Academy [July 2021]
